Insightful graphic presentations help readers visually grasp the connections between the calculus and the algebraic and geometric approach to the same material. End-of-chapter problems present simple numerical/mathematical exercises, which strengthens the reader's intuition before they tackle the book's analytical, theoretical, behavioral, and complex problems. Unlike other more theoretical books, MICROECONOMIC THEORY, 12E closely connects all theory that is presented to real applications in the world today. Insightful graphic presentations help visual learners see the connections between the calculus and the algebra/geometry of the same material. In addition, end-of-chapter problems are now presented in two tiers: Simple numerical/mathematical exercises, which build student intuition, are followed by more analytical, theoretical, and complex problems. Mathematica is the most widely available computational program available to potential buyers of the book. Mathematica for Microeconomics focuses on teaching economics, not computer programming and that it devotes some space to solving equations "by hand." The author has made sure that the book is compatible with the most frequently used microeconomics textbooks on the market today. This book is designed as a supplemental tool for courses in microeconomics and mathematical economics. It shows professors and students steps to solving microeconomics problems. Readers may begin reading at any chapter, and they may use the book as a "virtual instructor" to facilitate self-learning. They will recognize some of the popular problems, which have been taken from widely-used microeconomics texts. Also included is a CD-ROM containing the Mathematica® MathReader (a viewing program similar to Adobe Acrobat) and folders specific to each chapter of the book. This book emphasizes economics over mathematics as it: \* Presents applications of the mathematics required to solve microeconomics problems \* Demonstrates the use of computational tools to do mathematics \* Provides discussions of the results of the problems \* Stimulates users to extend the programs and perform their own comparative statics and dynamics \* Provides users with tools to build their own Mathematica programs for microeconomics
